

Introduction

Many coffee drinkers explore different beans and brewing styles, but often lack a way to remember what they liked or disliked.

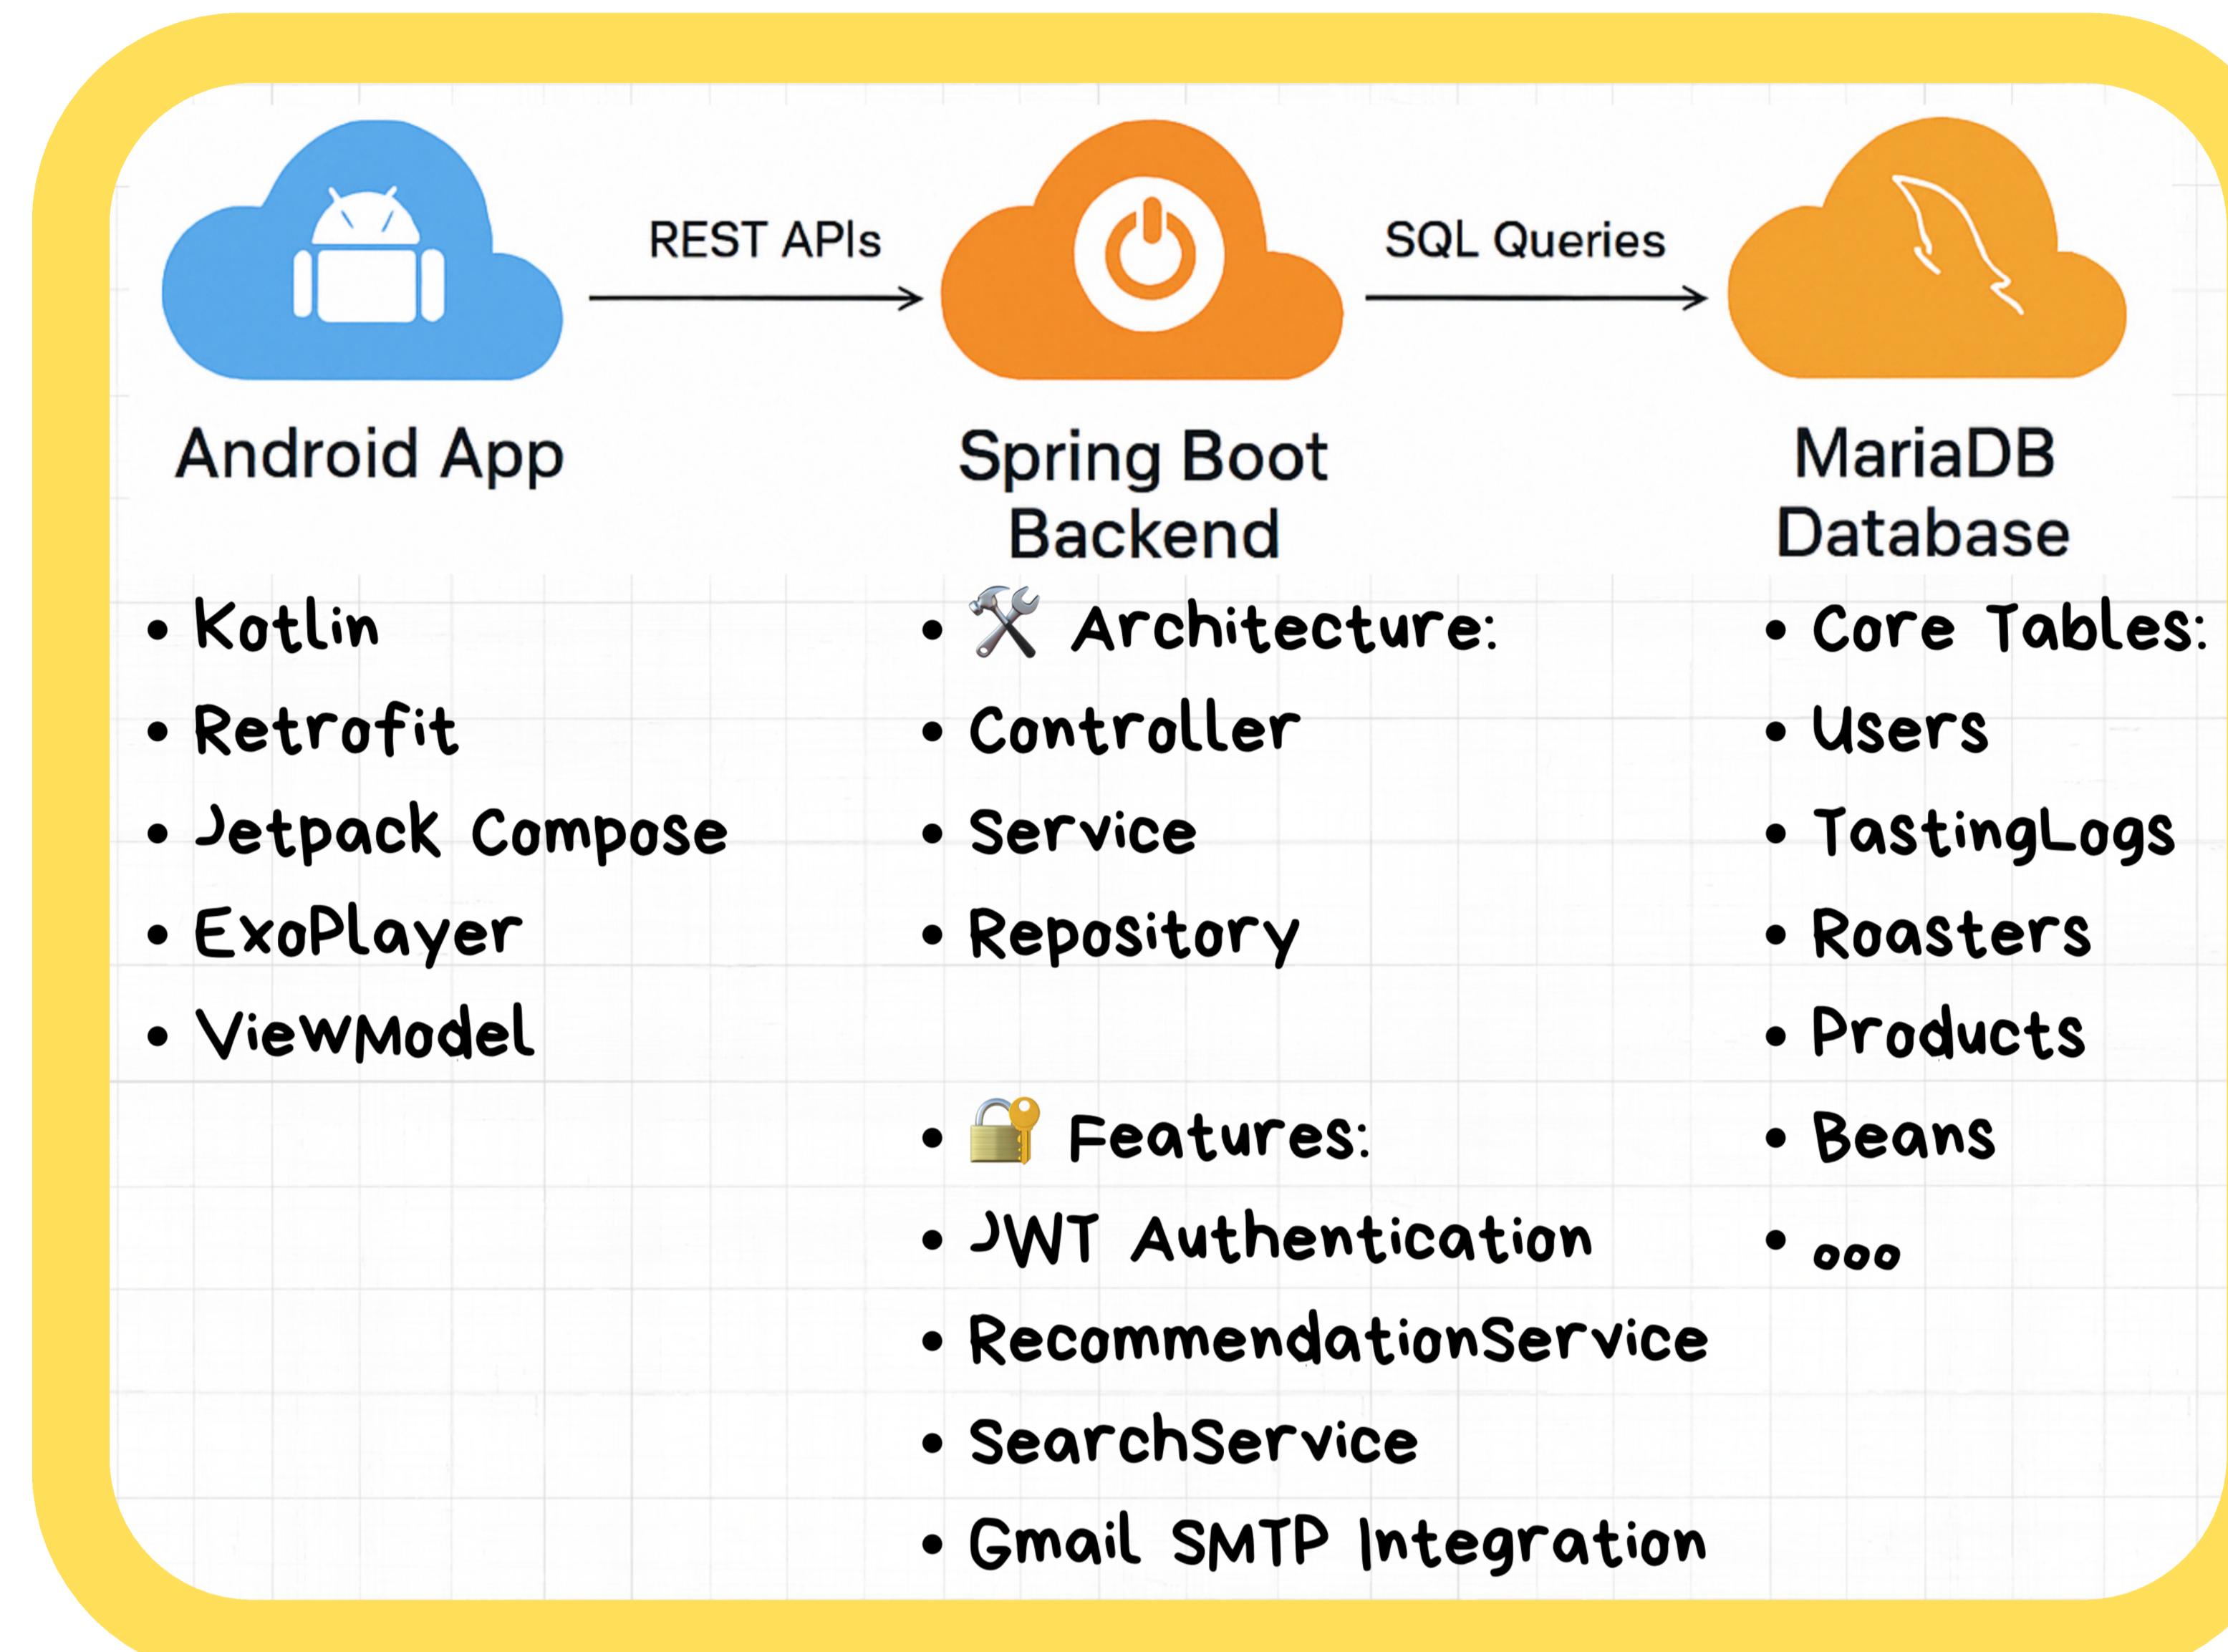

Bean Vibes was created to give specialty coffee lovers a structured system to log, analyze, and revisit their tasting experiences.

The goal is to simplify note-taking, uncover flavor preferences, and make it easier to discover new products through data-driven recommendations.

System Design

System Architecture

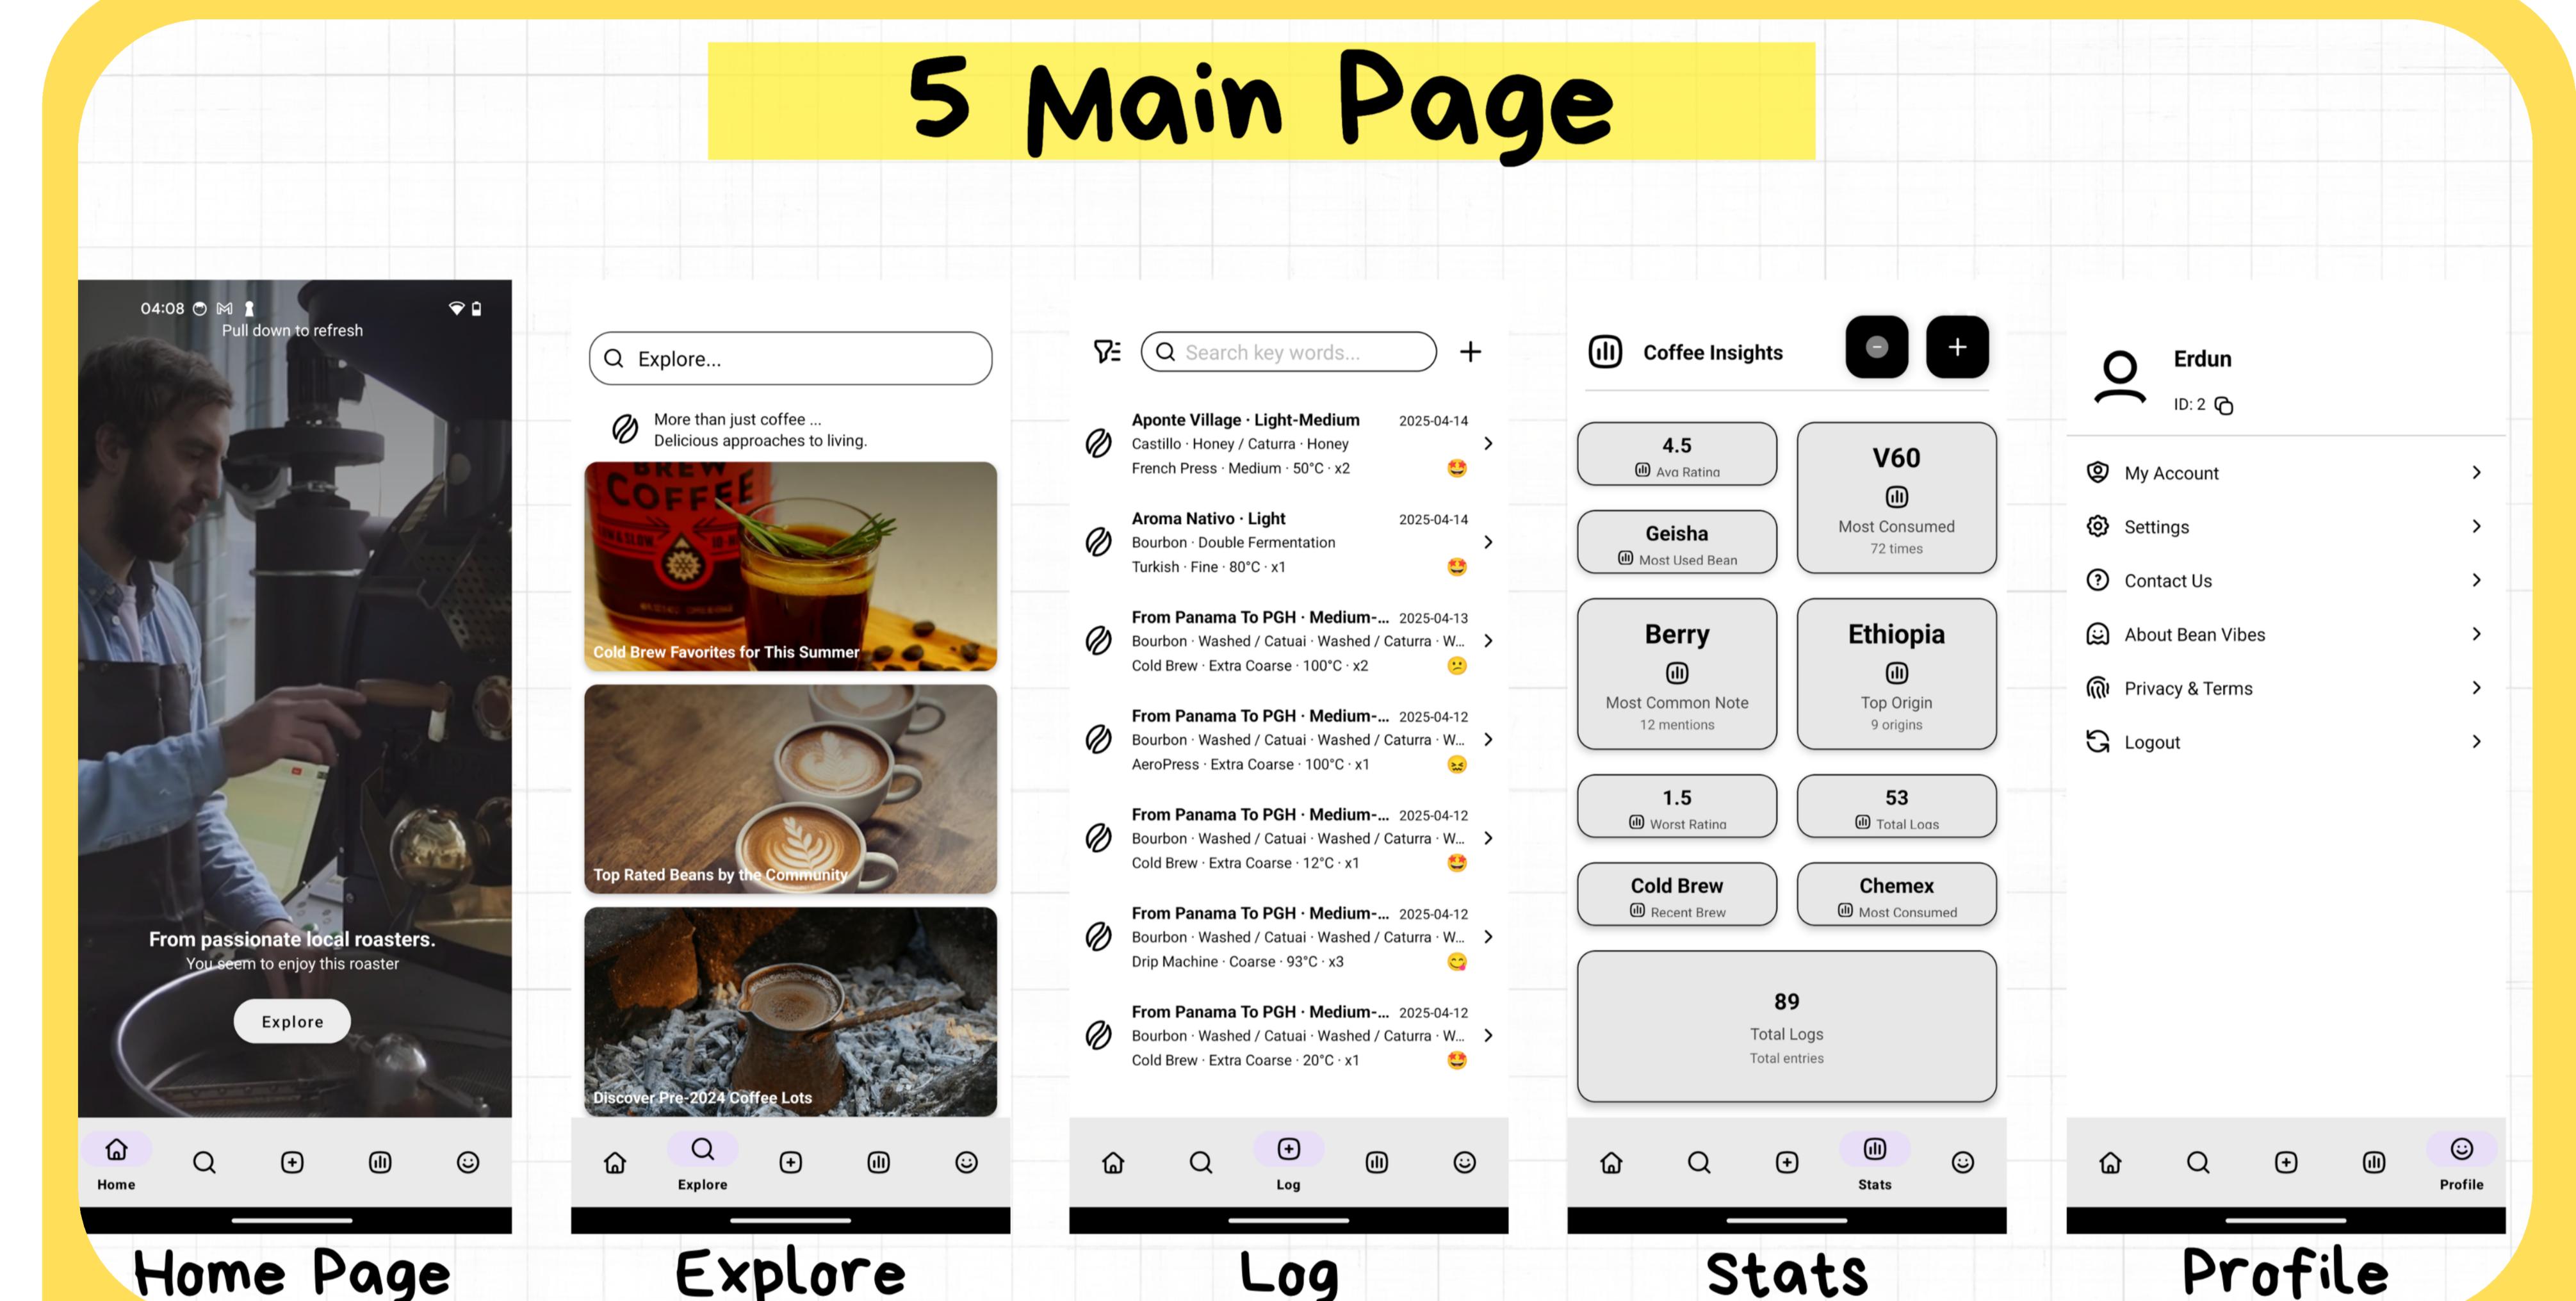

Recommendation Logic

- [User Tasting Logs]
- ↓
- [Analyze Ratings / Notes / Brew Method/etc..]
- ↓
- [Native SQL Queries/Intelligent Model(future)]
- ↓
- [Top Matching Products/Roaster/Beans/ etc.]

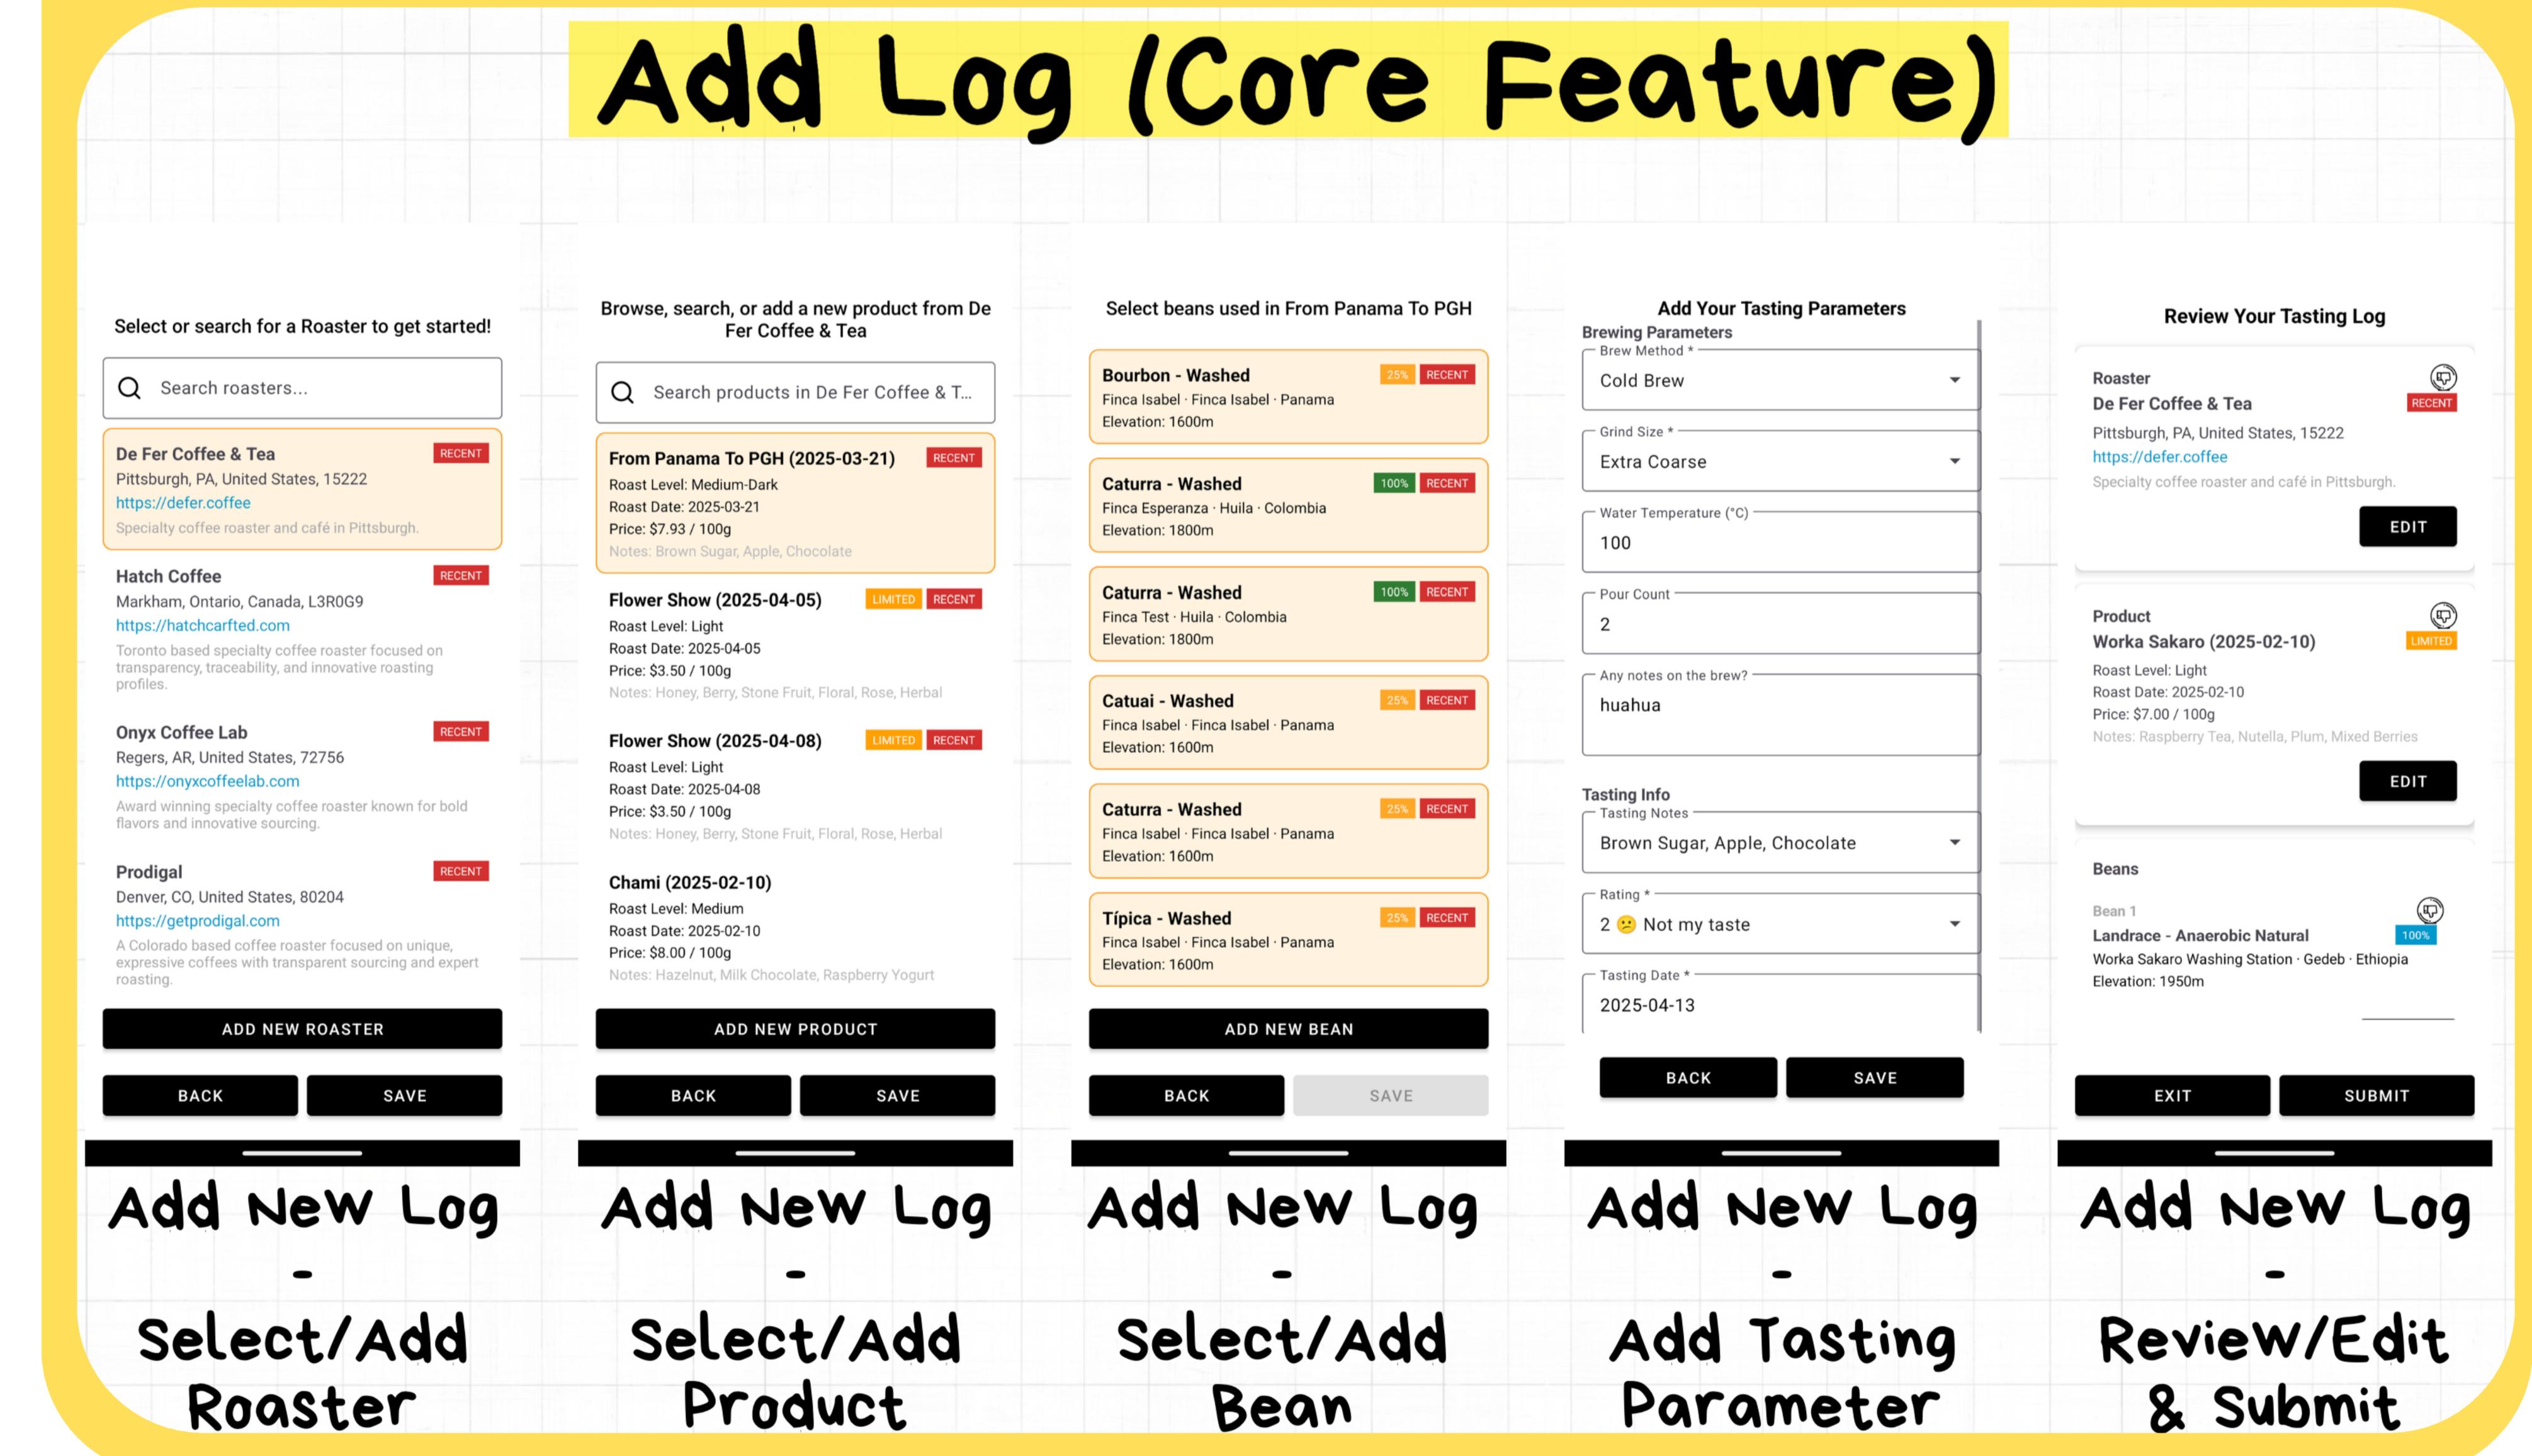

Acknowledgements
